

PA Application | Multizone Paging System (Line Level Switching)

Individual Zone Amplifier System

This system switches line level signals out to zone amplifiers, which then power the local 100V line speakers.

Each zone can be connected with its own background music source and local paging microphone as required.

All zone amplifiers must be sized according to the speaker load within each zone. Zone amps can be located up to 300m from the A 4585 paging controller.

Max distance for paging consoles from controller is 300 metres.

- RCA Cable
- Cat5e UTP Data Cable
- 100V Line Speaker Cable
- Balanced Line Cable
